

Mobile design

- use slideouts in place of modals
- many parts are going to difficult to interact w/ on mobile, find ways to condense info
- main menu will slide out from left, modal replacements will slide out from right.
- all slideouts will have an X to close or can be swiped to close

- SIZES

Laptop	tablet	phone
1280	768 X 1024	360 X 640

- Laptop size should resize without trouble if built properly

- on mobile icons will be added to the top to allow selection of different menu items to help avoid lots of scrolling.

For example on the dashboard there will be buttons for the calendar, search function sites + booking

- modals will be replaced w/ slides.
- slides will be able to be closed by either swiping or by an X in a corner
